EDUCATION

National Institute of Technology, Delhi <i>Bachelor of Technology - Electrical and Electronics Engineering</i>	2021 - 2025 CGPA: 7.08
Bihar Public School - 12th <i>Senior Secondary</i>	2020 Percentage: 91%

EXPERIENCE

Skeps <i>Software Engineer</i>	June 2025 – Present <i>Gurugram, India</i>
- Designed and maintained REST APIs powering the end-to-end loan origination workflow (eligibility evaluation, offer generation, application intake, status tracking) using Node.js, Express.js, and MySQL. - Engineered an internal Sentry monitoring service that scans production alerts across microservices and generates daily service-wise reports, replacing manual monitoring and reducing triage effort by 90%. - Reduced API response latency by 30% by optimizing complex SQL queries, adding targeted database indexes, and implementing Redis caching, improving throughput for high-volume loan-processing APIs. - Developed a self-service merchant onboarding platform that automated merchant, store, and environment provisioning, cutting onboarding time from hours to minutes and eliminating manual engineering intervention. - Integrated multiple third-party fraud detection and identity verification (KYC) providers into the loan approval pipeline, enabling faster verification and stronger fraud screening. - Implemented authentication and authorization using JWT, RBAC, and password hashing across lender, merchant, and admin portals, working across multiple microservices in an event-driven architecture.	

TECHNICAL SKILLS

Languages:	Java, JavaScript, Python, C++
Backend:	Spring Boot, Spring Security, Node.js, Express.js, REST APIs, Microservices
Cloud & Infra:	Docker, Kubernetes (GKE), Kafka, Redis, GitHub Actions, Jenkins, CI/CD, Git, Linux
Databases:	PostgreSQL, MySQL, MongoDB, Qdrant (Vector DB)
Practices:	System Design (HLD & LLD), Unit Testing, Code Reviews
Core CS:	Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

PROJECTS

Prompt2Prod (Distributed AI Code Assistant Platform) Link
- Architected a distributed AI coding platform spanning 6 Java/Spring Cloud microservices (API Gateway, Config, Discovery, Account, Workspace, and Intelligence), with the gateway routing all traffic and every service loading configuration from a Git-backed Config Service. - Engineered a RAG pipeline that chunks, embeds, and indexes entire codebases into Qdrant for semantic retrieval, streaming LLM responses to the React UI token-by-token over SSE for real-time feedback. - Implemented LLM tool-calling that feeds the model the project file tree and fetches only required files from MinIO via a tool call wrapped in a circuit breaker, minimizing storage reads. - Decoupled AI generation from storage using Kafka: the Intelligence service publishes a file-generated event that the Workspace service consumes to persist files in MinIO and metadata in PostgreSQL, backed by a Redis cache layer. - Designed an isolated code execution system on Kubernetes with per-project runner pods running live Vite dev servers and a sidecar syncing files from MinIO for automatic hot-reload of previews.

ACHIEVEMENTS

- **LeetCode Knight** - rating **1857** (top 5.9%); **1000+** **DSA problems** solved across LeetCode, Codeforces, and CodeChef.
- Secured **Global Rank 588** in LeetCode Weekly Contest 437 among **30,000+** participants.
- Achieved **All India Rank 42** out of 3,00,000 students in the Naukri.com Aptitude Test.
- Ranked **top 2%** in JEE Main and **top 1.5%** in JEE Advanced (2021) among 1M+ candidates.
- **Team captain** for NIT Delhi at the All India Inter-NIT Cricket Tournament.
